## Question 16

(a) [2 marks]
$\mathrm{Mg}>\mathrm{Zn}>\mathrm{Pb}>\mathrm{Cu}$
(b) [1 mark]
$\square$
(c) [3 marks]

Reduction half equation

$$
\mathrm{Pb}^{2+}+2 \mathrm{e}^{-} \rightarrow \mathrm{Pb}
$$

Oxidation half equation

$$
\mathrm{Zn} \rightarrow \mathrm{Zn}^{2+}+2 \mathrm{e}^{-}
$$

$\square$

$$

(e) [1 mark]

It will oscillate between 99 and 433 pm.

## (f) [2 marks]

A bond length of 0 is impossible because of the Coulombic repulsion between the nuclei, so the bond energy should go to infinity as the bond length approaches zero.
(g) [2 marks]

A bond length of infinity corresponds to two non-bonded atoms, so the bond energy should approach a constant as the bond length goes to zero, reflecting the fact that there is less and less interaction between the atoms at this distance.

## (h) [3 marks]

Oops - the intention here was to have 1 mark for each of the features in (c), (e) and (f). Unfortunately the scale is completely wrong for drawing a bond with a dissociation energy of 1.57 eV ! Sorry. Under the circumstances 1.5 marks were given to each for the features in ( f ) and ( g ), and ignore the dissociation energy entirely.
(i) [4 marks]
Nocos Nocos

## (j) [2 marks]

$\mathrm{TiF}_{2}$ is bent. Since it absorbs the same frequencies in its IR and Raman spectra, it cannot have a COS.
(k) [2 marks]
$\mathrm{XeF}_{4}$ doesn't have any peaks common to both spectra. While this could just be a coincidence, it's more likely (and in fact true) that these are prohibited by the rule of mutual exclusion, which means that it must have a COS and therefore be square planar.
(I) [3 marks]

## (m) [2 marks]

Again, there are no peaks common to both spectra. While this could just be a coincidence, with so many peaks it's most likely that these are prohibited by the rule of mutual exclusion, which means that it must have a COS. The only isomer of the ones above which has a COS is the trans isomer.
(n) [2 marks]

By the rule of mutual exclusion, $\mathrm{N}_{2} \mathrm{O}$ can't have a COS. Since we know it's linear, the atoms must be bonded in the order NNO.

## Question 19

## (a) [2 marks]

A large value of $\mathrm{K}_{\mathrm{c}}$ indicates that the solute favours the stationary phase and moves slowly through the column.
(b) [2 marks]

$$
\begin{aligned}
& \text { Mobile phase: }[A]=10 / 2 \times 10^{6} \mathrm{~nm}^{3}=5 \times 10^{-6} \text { molecules } / \mathrm{nm}^{3} \\
& \left.[B]=2 / 2 \times 10^{6} \mathrm{~nm}^{3}=1 \times 10^{-6} \text { molecules } / \mathrm{nm}^{3}\right\} 0.5 \text { marks } \\
& \text { Stationary phase: } \quad[A]=10 / 5 \times 10^{4} \mathrm{~nm}^{3}=2 \times 10^{-4} \text { molecules } / \mathrm{nm}^{3} \\
& {[B]=7 / 5 \times 10^{4} \mathrm{~nm}^{3}=1.4 \times 10^{-4} \text { molecules } / \mathrm{nm}^{3} \quad 0.5 \text { marks }} \\
& \mathrm{K}_{\mathrm{c}}(\mathrm{~A})=[\mathrm{A}]_{\mathrm{S}} /[\mathrm{A}]_{\mathrm{M}}=2 \times 10^{-4} / 5 \times 10^{-6}=40 \quad 0.5 \text { marks } \\
& \mathrm{K}_{\mathrm{c}}(\mathrm{~B})=[\mathrm{B}]_{\mathrm{S}} /[\mathrm{B}]_{M}=1.4 \times 10^{-4} / 1 \times 10^{-6}=140 \quad 0.5 \text { marks }
\end{aligned}
$$

(c) [2 marks]

The solute emerges from the column at a time very close to the dead time $\left(\mathrm{t}_{\mathrm{M}}\right)$.
(d) [2 marks]

$$
R_{s}=\frac{2(17.63-16.40)}{(1.11+1.21)}=1.06
$$

(e) [4 marks]

$$
\begin{aligned}
& \mathrm{N}_{\mathrm{A}}=16\left(\frac{16.40}{1.11}\right)^{2}=3493 ; \quad \mathrm{N}_{\mathrm{B}}=16\left(\frac{17.63}{1.21}\right)^{2}=3397 \\
& \mathrm{~N}_{\mathrm{A}}=\frac{3493+3397}{2}=3445
\end{aligned}
$$

(f) [2 marks]

$$
\mathrm{H}=\mathrm{I} / \mathrm{N}=30.0 \mathrm{~cm} / 3445=8.71 \times 10^{\mathbf{- 3}} \mathbf{~ c m}
$$

(g) [6 marks]

$$
\begin{aligned}
& \frac{\left(\mathrm{R}_{\mathrm{s}}\right)_{1}}{\left(\mathrm{R}_{\mathrm{s}}\right)_{2}}=\frac{\sqrt{\mathrm{N}_{1}}}{\sqrt{\mathrm{~N}_{2}}} \\
& \frac{1.06}{1.5}=\frac{\sqrt{3445}}{\sqrt{\mathrm{~N}_{2}}} \\
& \mathrm{~N}_{2}=3445\left(\frac{1.5}{1.06}\right)^{2}=6.9 \times 10^{3} \\
& \mathrm{~L}=\mathrm{N} \times \mathrm{H}=6.9 \times 10^{3} \times 8.7 \times 10^{-3}=60 \mathrm{~cm} \\
& \text { (h) }[2 \text { marks }]
\end{aligned}
$$
